

# HARLEQUIN WHITE

*Technical Details*

## HARLEQUIN WHITE

Harlequin is a black and white marble. The elegant white colored base presents thick black streaks with greyish edges.

The morphology of the veins of this natural stone is linear. Each one of them forms a beautiful wavy path. These sinuous patterns generate a visual effect of smooth movements that run across the entire surface.

The rhythm of the veins is reinforced by the attractive play of contrasts between black and white. Its extreme chromatism makes Harlequin a perfect marble for large-format and book-match compositions.

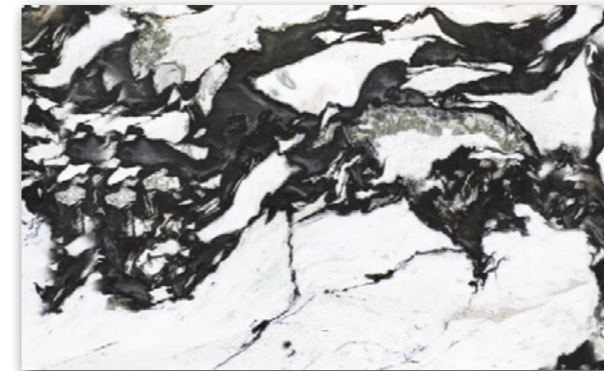

Well-known architects and interior designers use Harlequin in interior and exterior cladding and interior flooring. It is usually the absolute protagonist in residential and hotel projects that love contrast and good taste.

## MECHANICAL PHYSICAL PROPERTIES

PROPERTY	STANDARD	VALUE
Water absorption	UNE EN 13755	0,46%
Flexural strength	UNE EN 12372	8,3 Mpa
Bulk density	UNE EN 1936	2,55 g/cm <sup>3</sup>
Compressive strenght	UNE EN 1926	108.4 MPa

Technical information included in this document has been obtained from one or several standardized tests. Values may vary in later tests due to natural stone variation, as it is a product obtained from nature.

## SIZES

Sizes can be adapted to each project requirements. Standard thickness is 2cm and maximum size for this thickness is 240x140cm. For other thickness check available sizes.

*Dimensional tolerance limits according to standards UNE-EN 12058 and UNE-EN 1341.*

Standard surface finishes are

POLISHED

HONED

DOMUS

SANDBLASTED

## RECOMMENDED USES

	RESIDENTIAL	COMMERCIAL
